

THE POWER WITHIN™

WALK-BEHIND MOWER

HOW TO FIND THE PERFECT LAWN MOWER?

Buying a lawn mower may seem like a routine task. But to ensure that you buy the lawn mower that best meets your specific needs you'll want to factor in the size of your lawn, whether your lawn is hilly or flat, the number of trees or other obstacles to mow around, as well as the needs of the person doing most of the mowing.

There are many different lawn mowers on the market to meet a variety of lawn mowing needs. A mower that is perfect for your neighbor may not be the right one for you.

To find a mower that meets your needs, follow the tips we've assembled for you in this helpful buyer's guide.

WHAT MOWER IS RIGHT FOR YOU?

Push mowers are ideal for flat lawns under 500 m². Their cutting deck ranges from 40 – 48cm, which is the perfect size to quickly and efficiently make your lawn look beautiful. If you are in good physical condition this may be a great way to save when purchasing a new lawn mower.

Self-Propelled mowers are perfect for yards up to 1000 m². The mower actually pushes itself to reduce fatigue that may come with a push mower. You simply walk behind the mower to control its path. Self-Propelled lawn mowers offer both front and rear wheel drive to better suit your lawn. See below to determine which is right for you:

Front-drive mowers are remarkably easy to maneuver and turn. Swivel front wheels make this possible by allowing easy 180-degree turns. These are perfect for smaller yards with numerous obstacles.

Rear-wheel drive mowers have better traction on hills and better steering control, but may make it a little harder to make sharp turns. These mowers are suited for open lawns with steep hills.

If your lawn is larger than 1000 m² you may want to consider a Riding Lawn Mower.

LAWN MOWER FEATURE THAT MAKE A DIFFERENCE

1. Starting Systems

An easy-starting lawn mower is one of the most important features to get the job started right. That's why selecting the right starting system is vital in ensuring you a hassle-free lawn mowing experience.

- **Electric Starting Systems** eliminate pull starts all together. Simply prime the engine and turn the key for quick, dependable starts without any maintenance required.

- **Automatic Choke Starting Systems** come ready to run. Simply engage the safety handle and pull the starter rope for a hassle-free start that completely eliminates priming or choking.
- **Primer Starting System** pumps the exact amount of fuel into the carburetor to allow quick and easy one pull starts.

Briggs & Stratton ReadyStart™ System - No priming, no choking, no worries- just pull for power.

The ReadyStart™ system from Briggs & Stratton helps eliminate the strain and the hassle of starting your lawn mower. Manual priming and choking are now a thing of the past. Simply pull the rope and mow. The ReadyStart™ system makes starting Briggs & Stratton power products easier and faster.

2. What To Do With The Clippings

Bagging is a technique used to catch cut grass. They are available as both rear bagging and side bagging mowers. Rear bagging mowers give you more maneuverability around trees and landscaping throughout your lawn. Bagging leaves you with a fresh looking lawn every time you mow.

Mulching mowers use mulching blades that cut the grass into fine piece and return them to your lawn to act as a natural fertilizer. This works to enhance your lawn and does not require any extra time or money. It also eliminates the time you may spend emptying the grass out of a bagging mower.

3. Additional Features

Leaf-Handling Capability. These mowers suck up, shred and catch leaves with a screen that goes between the cutting blade and the discharge chute. Several newer mowers offer this unique feature.

Sound Quality: Briggs & Stratton offers specially designed mufflers to reduce to the sound of your mower during operation.

Durability: When purchasing a lawn mower, look for engine features like Premium air cleaners and/or Overhead valve technology (OHV) that help make your lawn mower engine last a lifetime.

SAFETY TIPS: BE CAREFUL OUT THERE

Regardless of which mower you choose, don't forget to practice safety. Be sure to completely read the safety information contained in the operator's manual and check the proper operation regularly.

We've assembled some guidelines below to help keep you safe while using your equipment:

- Check your lawn for any debris or objects, such as toys that could pose a hazard if you mowed over them.
- Mow only in daylight, when the grass is dry.
- Keep you children and pets out of the mowing area. Children under 12 should not operate a walk-behind mower

- Never let the starter rope snap back when starting a mower.
- Look 1 to 1.5 meters directly ahead of you while mowing.
- Never tilt a mower; always keep all four wheels on ground.
- Take special care when mowing hills and inclines.
- With your walk-behind mower, always mow across an incline or hill.
- Always turn off mower when crossing a sidewalk or driveway.
- Never adjust mower height, clean grass chute, remove grass catcher or repair the mower while the engine's running.
- Never de-activate safety devices.
- Never pull mower towards you.
- Always stay clear of a hot engine. Mufflers can reach up to 1,200°.
- Always wear protective eyewear.
- Always read your operator's manual thoroughly before operating your mower for the first time.

BASIC ENGINE CARE

Lawn mowers are built to last. However, as with any power product basic maintenance can be the difference in ensuring that your investment lasts a lifetime. Below is a basic maintenance schedule that should be followed by every lawn mower owner:

- Check oil level - every 5 hours
- Change oil - after the first 5 hours of use for brand new lawn mowers
- Change oil - once a season or 50 hours of usage
- Replace air filter - once a season or 25 hours of usage
- Replace spark plug - once a season or 100 hours of usage
- Replace fuel filter - once a season or 100 hours of usage
- Add fuel stabilizer - anytime after re-fuelling to keep your fuel fresh
