

IMPORTANT SAFETY INFORMATION AND

INSTRUCTIONS FOR ENGINE SELECTION ENGINE INSTALLATION ENGINE OPERATION

In the USA and Canada, our 24 hour hotline is:

18002333723

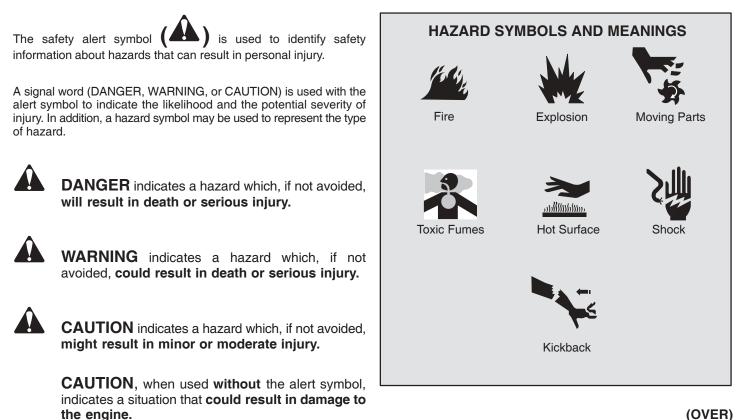

Briggs & Stratton Corporation Milwaukee, Wisconsin 53201

www.briggsandstratton.com

Keep these instructions for future reference.

A D Before installing and operating this engine read and observe all warnings, cautions and instructions on both sides of this sheet, on the engine, and in the operating & maintenance instructions.

NOTE: This sheet of instructions and safety information is not meant to cover all possible conditions and situations that may occur. Read entire Operating & Maintenance Instructions for this engine AND the instructions for the equipment this engine powers. Failure to follow instructions and safety information could result in serious injury or death.

ENGINE SELECTION

Some engines are unique and designed for specific applications or types of equipment. If this engine will be used to build new equipment, contact Briggs & Stratton to ensure that the engine is appropriate for the intended use.

Note: For all Go-karts use only a model 136200 series engine, which offers improved safety and performance.

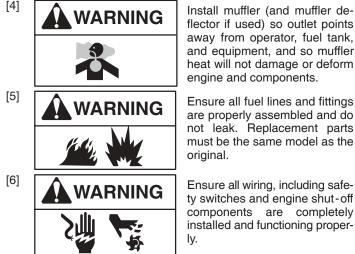

Replacement engines should be the same model as the original engine, or be the Briggs & Stratton designated replacement engine. Refer to the Operation & Maintenance Instructions for engine identification information.

Note: For all Go-karts use only a model 136200 series engine, which offers improved safety and performance.

Do not use Briggs & Stratton engines on 3-wheel All-Terrain Vehicles (ATVs), motor bikes, air craft products, or vehicles intended for use in competitive events. Briggs & Stratton does not approve of or authorize such uses.

ENGINE INSTALLATION

- [1] Do not attempt to install this engine if you do not have the appropriate tools and knowledge of small engine installation procedures. Use only Briggs & Stratton parts. Contact your Authorized Service Dealer for assistance.
- Do not modify the engine in any way without Briggs & Stratton [2] factory approval. Any such modification is at the owner's sole risk.
- If the exhaust system on the old engine was supplied by the [3] equipment manufacturer, you must transfer the exhaust system and related components (original muffler and related pipes, brackets, clamps, and shields) to the new engine. All components must be in good condition.

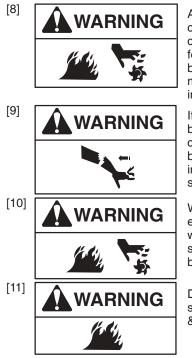

flector if used) so outlet points away from operator, fuel tank, and equipment, and so muffler heat will not damage or deform engine and components.

Ensure all fuel lines and fittings are properly assembled and do not leak. Replacement parts must be the same model as the

Ensure all wiring, including safety switches and engine shut-off components are completely installed and functioning proper-

Set engine speed to equipment manufacturer's specification. [7] Refer to equipment manufacturer's manual. Do not tamper with governor springs, or other parts that will increase engine speed above specification.

All engine parts, including fuel cap, spark plug, muffler, air cleaner, and covers and guards for drive components (gears, belts, shafts, couplings, etc.) must be in place before attempting to start engine.

If engine is installed on walk behind lawn mower, all mower components, including cutting must be correctly blade. installed before attempting to start engine.

When working on the engine or equipment, remove spark plug wire from spark plug. For electric start, remove negative wire from batterv.

Do not check for spark with spark plug removed. Use Briggs & Stratton spark tester #19368.

ENGINE OPERATION

WARNING

When adding fuel:

Turn engine off and let engine cool at least 2 minutes before removing gas cap.

Fill fuel tank outdoors or in well-ventilated area. Fill tank to about 1 inch below lowest portion of neck to allow for fuel expansion. Keep gasoline away from sparks, open flames, pilot lights, heat, and other ignition sources.

WARNING

When starting engine:

Remove all external equipment/engine loads.

Wait until spilled fuel is evaporated. Start engine outdoors. Pull cord slowly until resistance is felt, then pull rapidly.

If engine floods, set choke to OPEN/RUN, place throttle in FAST and crank until engine starts.

WARNING

When operating equipment:

Do not tip engine or equipment at angle which causes gasoline to spill.

Run engine outdoors. Do not run in enclosed area, even if doors or windows are open.

Do not choke carburetor to stop engine.

IMPORTANT!

Read these instructions carefully before operating this Engine for the first time.

Guessing how to run it may cause you unnecessary inconvenience, aggravation, or failure to receive the fine service that is built into it.

There is a right way to operate this Engine. This book tells you how.

Each Engine is carefully tested and adjusted at the factory before packing for shipment, and with reasonable care should give you many years of satisfactory service.

DO NOT START THIS ENGINE UNTIL YOU HAVE READ CAREFULLY THE INSTRUCTIONS ON PREPARING AND USING THE ENGINE, PAGES 3 TO 5.

For Maintenance Adjustments, see pages 6 to 9.

If you have difficulty in operating your engine and you need outside help, contact your dealer or nearest member of our Authorized Service Organization. See back cover.

Briggs & Stratton manufactured only the engine on your powered equipment. For other service or parts, write to the manufacturer of the complete equipment or see the dealer from whom purchased.

CAUTION !-

- 1. **PROVIDE EFFICIENT VENTILATION.** Exhaust gases contain carbon monoxide which is odorless and a deadly poison. Proper care must be taken to provide efficient ventilation.
- 2. DO NOT FILL GASOLINE TANK WHILE ENGINE IS RUNNING. Avoid spilling gasoline on a hot engine this may cause an explosion and serious injury.
- 3. KEEP ENGINE CLEAN. This engine is air-cooled. If cooling system becomes clogged, serious damage may result. Therefore, keep the blower screen, fins on flywheel, cylinder head and block free from grass or dirr
- 5. Be sure nobody is behind you when starting engine with rope starter.

GENERAL INFORMATION

This engine is a single cylinder, L-Head air-cooled type; bore 2'' and stroke 2''. It is rated at:

1.58 h.p at 2600 r.p.m. 1.87 h.p. at 3100 r.p.m. 2.00 h.p. at 3600 r.p.m.

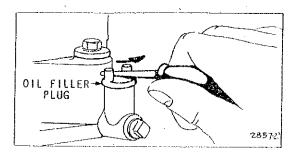

The horsepower ratings listed above are established by standard I.C.E.I. procedures. For practical operation, the horsepower loading should not exceed 85 per cent of these ratings. Engine power will decrease $3\frac{1}{2}$ per cent for each 1,000 feet above sea level, and 1 per cent for each 10 degrees above 60 degrees F.

PREPARATION OF ENGINE BEFORE STARTING

Fill Crankcase With Oil

一次のないないないないないないないない

Remove the oil filler plug. Use a screwdriver or bar. Place the engine level. Fill the crankcase to the top of the filler pipe.

For temperatures 32° and above use Mobiloil Arctic S. A. E. No. 20 or equal.

For temperatures below 32° use Mobiloil 10W (S. A. E. No. 10W) or equal.

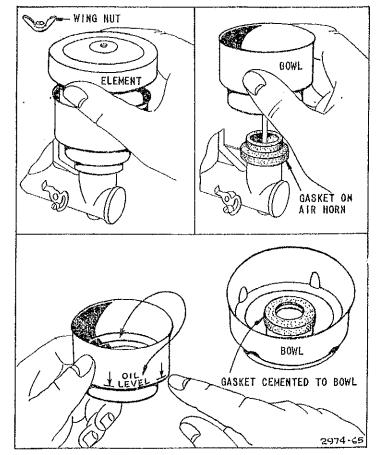

For temperatures below 0° add 1% of kerosene to the S. A. E. 10W oil for each degree below 0° but do not add more than 30%.

Put Oil In Air Cleaner

Air cleaner protects engine from grit and dirt. Use the same oil as in the crankcase. Remove wing nut. Lift out filter element. Lift off bowl. Pour oil in small bottom part of bowl to "oil level" mark at end of arrows. Replace bowl, element, and wing nut. Be sure gaskets are in place.

Fill Fuel Tank

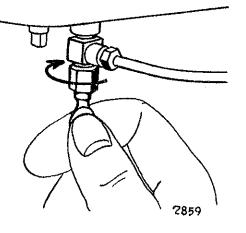

Use a good grade of regular, clean, fresh gasoline such as Mobilgas. Never use gasoline that has been standing in a can for several months as gum may form under such conditions and may clog the carburetor, fuel tank, etc. See that vent hole in cap is open. DO NOT MIX OIL WITH GASOLINE.

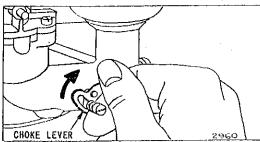

USING THE ENGINE

To Start Engine

1. Open Fuel Valve

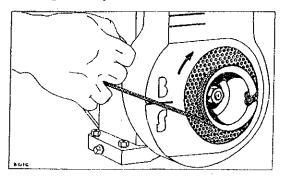

2. Close the Choke Move lever in direction of arrow.

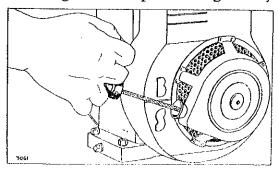

Rope Starter

Wind the starter rope around the pulley in direction shown by arrow. Then turn the pulley in the opposite direction (counterclockwise) until compression is felt. Pull the rope with a quick full arm stroke. Repeat if necessary with choke opened slightly. When engine starts open choke gradually.

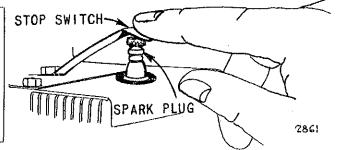

Rewind Starter

Pull rope out slowly until starter clutch engages, then pull until resistance of compression is felt. Continue to pull slowly about 2 or 3 inches until compression ceases. Allow starter rope to recoil and again pull out slowly until starter clutch engages. Then pull with a quick full arm stroke to start engine. Hold starter grip and allow rope to recoil. When engine starts open choke gradually.

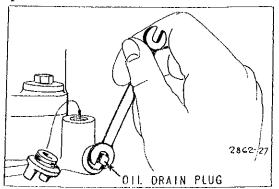

To Stop Engine

Push the stop switch against the end of spark plug.

Change Oil (Crankcase)

Change oil after first 5 hours of operation and every 25 hours thereafter. Remove the oil drain plug. Drain oil while engine is warm. Replace drain plug. Remove oil filler plug and refill crankcase with new oil. Replace oil filler plug. Check oil level regularly after each 5 hours of operation.

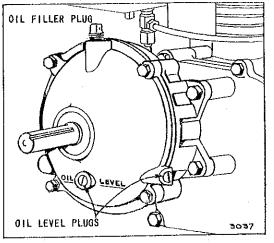

USING THE ENGINE

Check Oil (Gear Reduction)

6-TO-1 GEAR REDUCTION MODELS. Remove one of the oil plugs in lower half of gear cover every 100 hours of operation to check the oil level. To refill, pour oil (same grade as used in crankcase) into oil filler hole until oil runs out of lower hole. Replace both oil plugs.

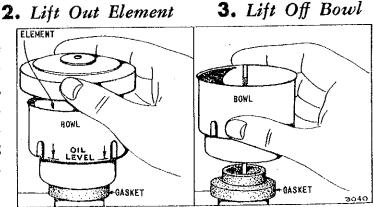

Change Oil (Air Cleaner)

Check the air cleaner frequently (every hour under extremely dusty conditions). Clean and refill at least every 25 hours.

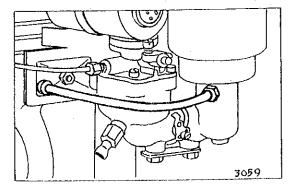

1. Remove Wing Nut 2. Lift Ou

4. Pour out old oil. Wash the filter element by swishing in gasoline and shake dry. Clean bowl, wipe dry. Replace bowl. Pour in oil to "oil level" mark shown. Replace filter element and wing nut. Be sure gaskets are in place.

BREATHER VENT KIT (Part No. 293714) To increase the service life of engines operating under very dirty conditions, a Breather Vent Kit, Part No. 293714, should be installed if not already on your engine as original equipment. This will prevent dust and dirt from entering the engine through the valve cover. Complete instructions are included with each kit.

STORAGE INSTRUCTIONS

Engines stored any length of time should be completely drained of fuel to prevent gum deposits forming on essential parts such as the carburetor, fuel filter, fuel lines, and tank.

Such deposits may affect the operation of the engine when again used. Therefore, it is important that the following instructions be adhered to before storing the engine:

a. Remove fuel tank drain plug. Open fuel valve. Drain tank completely.

b. Operate engine until it stops from

exhaustion of fuel to clean gasoline out of carburetor.

c. While the engine is still warm, drain and clean the crankcase. Refill with fresh oil.

d. Replace fuel tank drain plug.

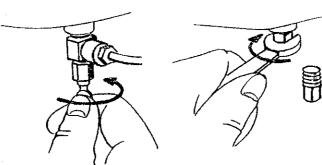

e. Leave fuel valve open.

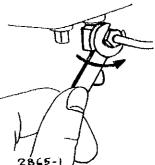

f. Remove spark plug, pour one ounce of S. A. E. No. 20 oil into cylinder and crank slowly to spread oil. Replace spark plug.

g. Clean dirt and chaff from cylinder and cylinder head fins, blower housing, etc.

MAINTENANCE ADJUSTMENTS

Draining Fuel Tank and Cleaning Fuel Filter

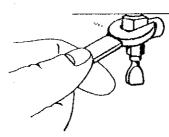

3. Detach Fuel Pipe

1. Close Fuel Valve

2. Remove Fuel Tank Drain Plug

4. Remove Fuel Filter

From Fuel Tank

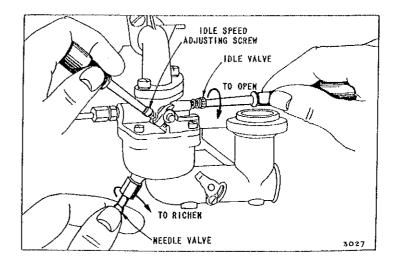

5. Clean With Gasoline. Screen Not Removable. Replace Filter, Pipe Plug, and Fuel Line.

Carburetor Adjustments

Close the needle valve carefully to avoid damaging it. Then open it $1\frac{1}{2}$ turns. Close the idle valve. Open it $\frac{1}{2}$ to $\frac{3}{4}$ turn. Start engine and allow it to warm up.

Turn needle valve in until engine misses, then turn it out past smooth operating point until engine runs unevenly. Now turn needle valve in just far enough so engine runs smoothly.

Set idle speed adjusting screw until engine idles at 1750 R.P.M. Hold throttle in idle position. Turn idle valve in or out until engine picks up speed and runs smoothly. Then again reset idle speed adjusting screw to bring engine to 1750 R.P.M. idling speed. Release throttle. Engine should accelerate without hesitation or sputtering. If it does not accelerate properly, the needle valve should be reset, usually to a richer mixture.

MAINTENANCE ADJUSTMENTS

Governor and Adjustments

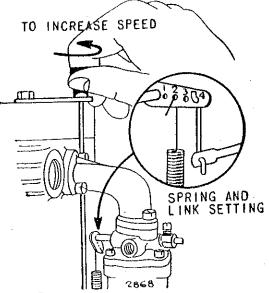

There are two different types of governors used on these engines. They are air vane and mechanical governors. The correct operating speed range is 2600 to 3600 R.P.M. The standard speed setting (no load) is 3300 R.P.M. Idle speed is 1750 R.P.M.

Air Vane Governor Adjustments

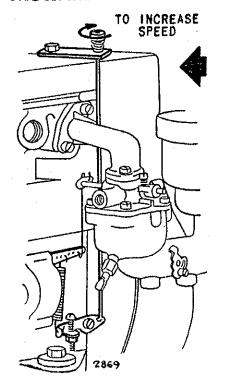

SPEED CONTROL

Speed adjusting thumb nut is located on top of engine. To increase speed turn thumb nut counterclockwise.

NOTE: Top loop of spring should be hooked in No. 2 hole of throttle lever. Should closer governing be required, move spring hook to No. 1 hole. If throttle oscillates move spring to No. 3 hole.

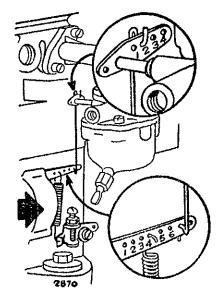

Mechanical Governor Adjustments

Speed adjusting screw is sometimes located below carburetor. To increase speed loosen nut and turn adjusting screw down. To reduce speed turn screw up.

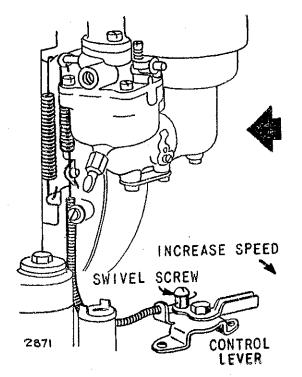

Speed adjusting thumb nut is located on top of engine. To increase speed turn adjusting thumb nut clockwise.

NOTE: Link should be hooked in No. 2 hole of carburetor throttle lever and spring loop should be in No. 4 hole of governor lever. For closer governing, move spring to No. 3, 2, or 1 holes in governor lever. (See drawing below.)

MAINTENANCE ADJUSTMENTS (Cont'd)

Remote Governor Control

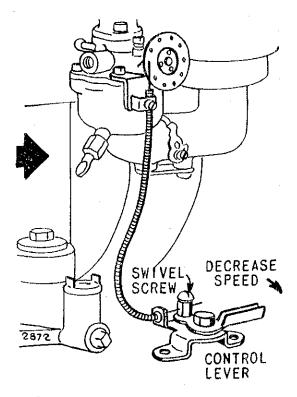

Engine speed is controlled by movement of the control lever as shown. Move control lever to HIGH speed position. Loosen screw on swivel. Move wire through swivel until desired operating speed is obtained. Retighten swivel screw, bend loose end of wire around swivel. Cut off excess wire.

Remote Throttle Control

Top speed of the engine is controlled by the governor. All other speeds from idle to top speed are controlled by a remote control lever at some distance from engine.

Move control lever to LOW speed position. Loosen screw on swivel. Move wire through swivel until carburetor throttle closes. Tighten swivel screw, bend loose end of wire around swivel. Cut off excess wire.

IMPORTANT NOTICE

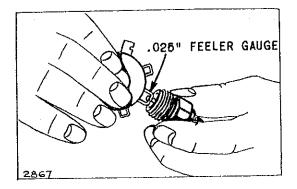

This book includes only necessary information for running your engine. Unless you have a thorough knowledge of internal combustion engines and proper tools, we do not recommend that you attempt to make major engine repairs. This does not mean that you shouldn't make necessary adjustments and simple repairs. For parts or service we advise you to get in touch with the nearest member of our Nation-wide Service Organization described on page 35 or refer to your classified telephone directory.

If detailed repair information is desired, a Repairman's Handbook may be obtained from the factory at \$1.00 per copy. Be sure to specify Model, Type, and Serial Number of your engine when ordering.

MAINTENANCE ADJUSTMENTS (Cont'd)

To Check Spark Plug Gap

Spark plug is 14mm (USE CHAMPION NO. J-8 OR EQUIVALENT). Keep a fresh plug on hand. Clean and reset the gap at .025" every 100 hours of operation. Use some graphite grease on threads when replacing spark plug.

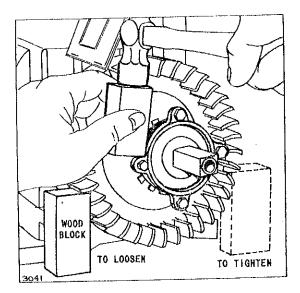

To Adjust and Clean Contact Points

Blower housing, flywheel, and magneto point dust cover must be removed.

To Remove Flywheel

Rewind Starter

Take off blower housing with starter attached. Remove 4 screws and screen from clutch housing. Replace screws in housing. Place a block of wood under fin on left side of flywheel. Hold a block of wood in close against one of the screw lugs. Use a hammer and drive clutch housing to the LEFT to loosen it.

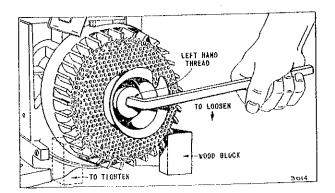

Rope Starter

Remove blower housing. Place a block of wood under flywheel fin on the right side, close to the flywheel to hold it solid. Use a large wrench, turn to right to loosen. Crankshaft has LEFT hand thread.

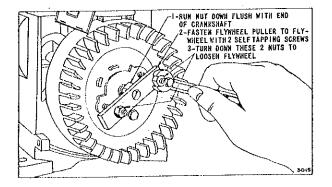

Never Try to Pry Off Flywheel

After removing nut, washer and pulley, loosen flywheel by using Flywheel Puller No. 19069.

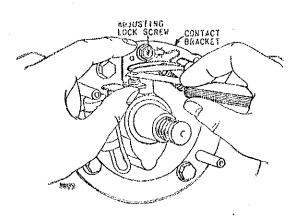

MAINTENANCE ADJUSTMENTS (Cont'd)

To Remove Flywheel With Flywheel Puller

Screw the nut back on shaft until it is flush with threads. Fasten flywheel puller to flywheel by screwing two self-tapping screws into holes provided in flywheel. Turn down the two nuts gradually until flywheel is loosened. Pull off flywheel. Save key.

To Adjust and Clean Contact Points

Remove dust cover. Points must be clean and line up squarely to make good contact. Do not file points — use fine sandpaper or hone to dress the points. Turn the crankshaft until points open to widest gap, or until keyway on crankshaft lines up with the plunger. Tighten the condenser clamp screw. Move condenser forward or backward with screwdriver until gap of .020" is obtained. If either or both points become badly pitted or burned, replace with

complete new Contact Point Bracket and Condenser. Replace dust cover.

To Reassemble Flywheel

Clean flywheel hole and tapered end of crankshaft thoroughly. Place keyway of crankshaft up. Put flywheel on shaft and align keyways. Insert the key into keyways and push it securely into place. (If key is partially sheared or damaged, replace with a new key, Part No. 61760. This is a soft metal key. DO NOT USE STEEL KEY.)

Rewind Starter

Put the spring washer on the crankshaft with hollow side against flywheel; then screw on the clutch housing. (Right hand thread.) Place a wood block under fin on right side of flywheel, hold a block in close against one of the screw lugs on clutch housing. Use heavy blows with a hammer or use Starter Clutch Wrench Nos. 19114 or 19161 to tighten clutch housing securely. Replace screen and then blower housing with starter.

Rope Starter

Assemble pulley and spring washer with hollow side next to pulley. Put on nut. Place the wood block under fin on left side of flywheel. Apply heavy pressure on wrench — seventy pounds at end of 10" wrench handle — to tighten nut. Replace blower housing.

Note: Flywheel key will shear if nut or clutch housing are not properly tightened. All Briggs & Stratton Service Organizations are equipped with special tools to tighten nut and clutch housing.

PARTS SECTION INDEX

How to Find the Correct Number of Part You Need
Page
Numerical Parts List
Illustrations of Parts Groups:
Cylinder and Base Parts 12
Piston, Connecting Rod, Flywheel, Mechanical Governor, and Gear
Reduction Parts
Fuel System and Blower Housing Parts
Magneto Parts and Starter Parts 15
Accessories for Fuel System 16

HOW TO FIND THE CORRECT NUMBER OF THE PART YOU NEED

a. Make a note of your engine MODEL AND TYPE NUMBER (not the Serial Number) that appears on the metal nameplate attached to cylinder shield.

b. Refer to pages illustrating parts and locate the Master Part Number by comparing your old part with illustrations. Assemblies include all part numbers shown in frames in illustration. All parts shown in assembly frames on which part numbers are given can be purchased separately.

c. After the Master Part Number has been identified, refer to the following Parts List where these Master Part Numbers are listed in numerical order.

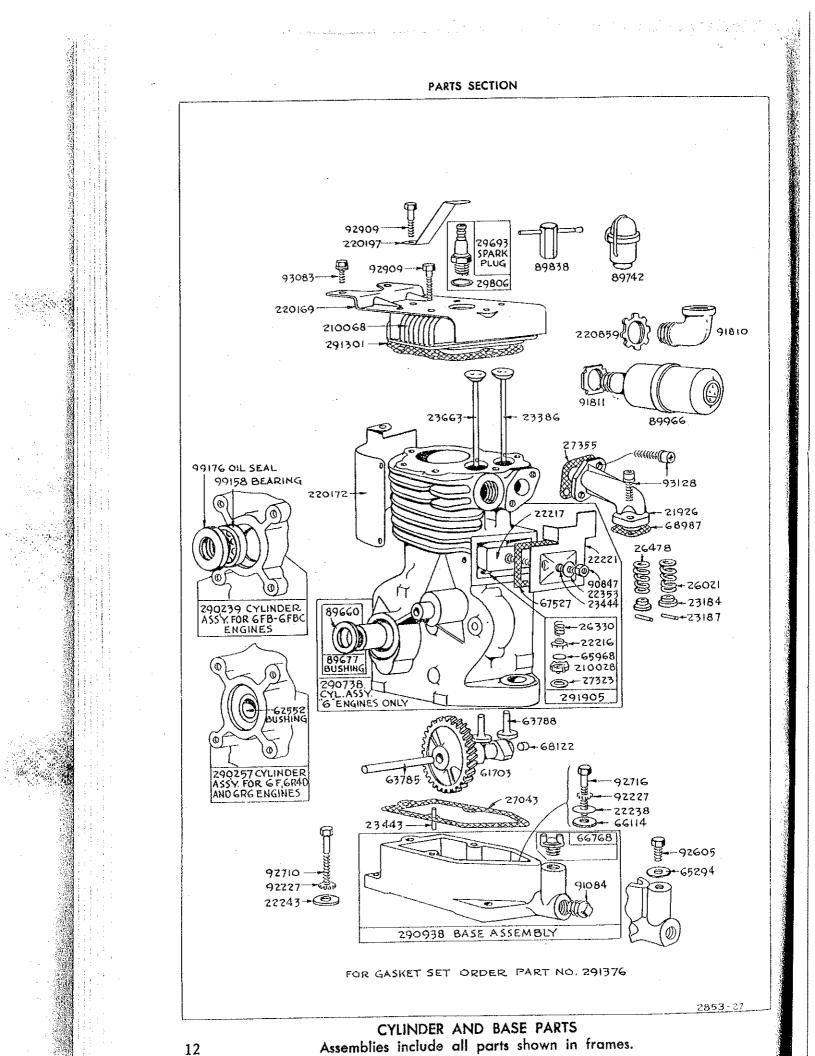

THE MASTER PART IS USED ON ALL TYPES OF ENGINES EXCEPT THOSE TYPES LISTED UNDER "NOTE."

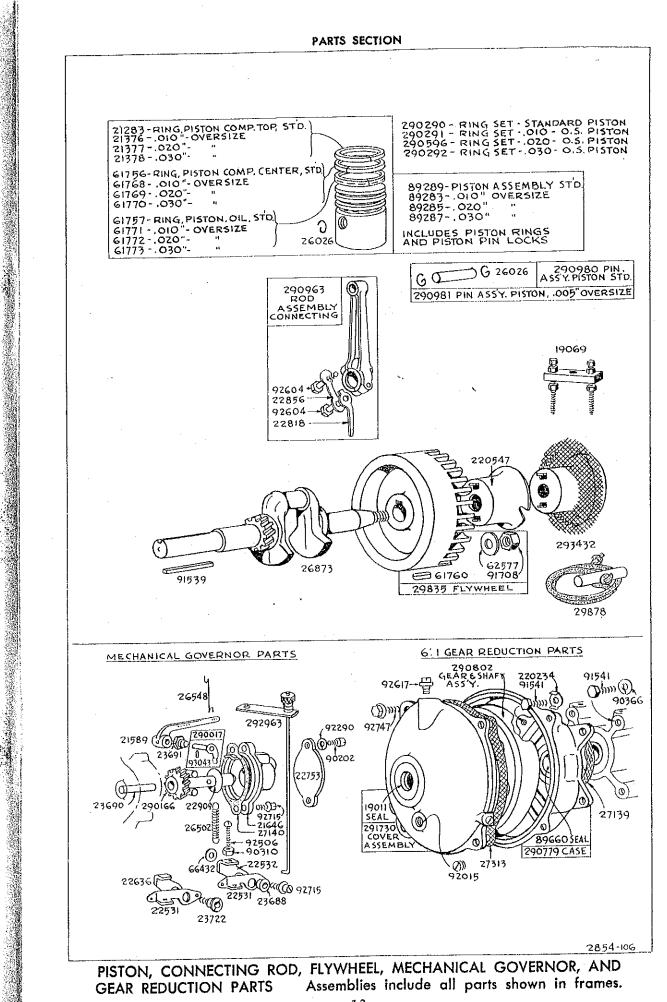

d. If a "Note" appears below the Master Part Number, this means that this part is made differently from the Master Part for certain types, and if your type is listed under "Note" order the part referred to.

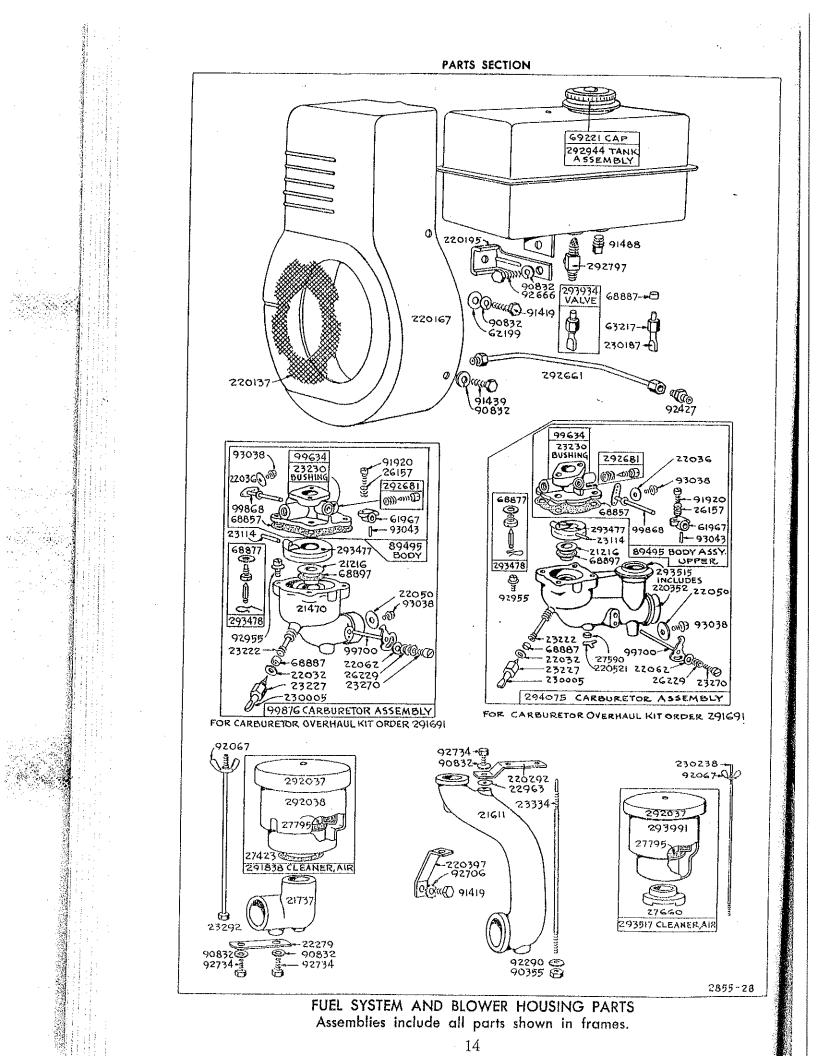

e. If your Engine Type Number does not appear after any part number listed under "Note," order the Master Part Number.

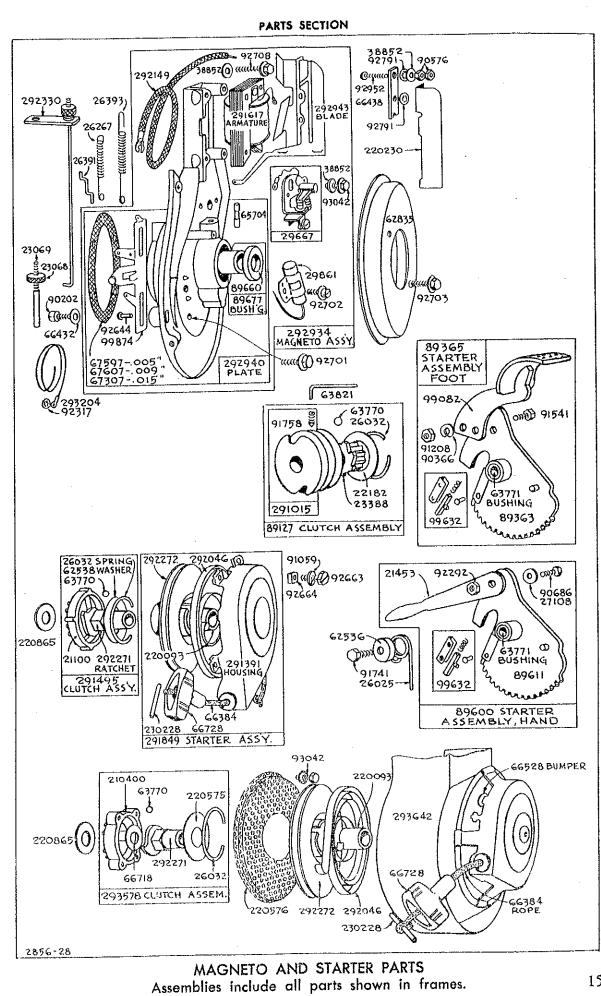

f. When ordering parts — or writing for service information — always specify the MODEL NUMBER — TYPE NUMBER — and SERIAL NUMBER of your engine.

g. All parts should be ordered from the nearest member of our Nation-wide Service Organization. (See back cover.) In ordering parts by mail, selling prices will be furnished on request or parts will be shipped at prevailing prices.

NATION-WIDE SERVICE ORGANIZATION

To provide prompt and efficient service on Briggs & Stratton engines, Central and Authorized Service Distributors are located in principal cities of the United States and Canada in addition to thousands of Registered Service Dealers located in almost every community.

Each Authorized Service Organization carries a stock of original Briggs & Stratton repair parts. Each is equipped with special factory service tools and factorytrained mechanics, assuring expert repair service on all Briggs & Stratton engines.

All Authorized Service Organizations are instructed by the factory to replace free of charge all parts found to be defective in either material or workmanship, according to the conditions of the Briggs & Stratton Warranty.

All gratis work done under the warranty is the responsibility of the Authorized Service Organization until all the material involved and supporting facts are submitted to and approved by the factory. In a difference of opinion regarding a Service Organization's decision, their terms should be accepted and, either through them or direct, have all materials and supporting facts submitted to the factory for review.

Genuine Briggs & Stratton service will assure continuous engine satisfaction. Our long experience in engine maintenance prompts us to urge that all service work be done by an Authorized Service Organization or at our factory. Mechanics unfamiliar with Briggs & Stratton engines, or without proper tools, should not be permitted to make major repairs.

Parts and repair work are F.O.B. any Authorized Briggs & Stratton Service Organization. The Central Service Distributor nearest you (see back page) will be glad to give you the name of our Engine Service Organization in your locality, or refer to the yellow classified advertising pages of your telephone directory.

BRIGGS & STRATTON ENGINE WARRANTY

BE SURE TO FILL IN AND MAIL WARRANTY REGISTRATION CARD WHICH ACCOMPANIED ENGINE AT TIME OF PURCHASE

THE WARRANTY — For Ninety Days from purchase date, Briggs & Stratton Corporation will replace for the original purchaser, FREE OF CHARGE, any part or parts found, upon examination at any factory Authorized Service Distributor or at our factory at Milwaukee, Wisconsin, or at any Authorized Service Distributor's place of business, to be defective under normal use and service, on account of defects in material or workmanship.

All transportation charges on part or parts submitted for replacement under this warranty must be borne by purchaser.

WHAT THIS WARRANTY DOES NOT INCLUDE — This warranty does not cover the free replacement of parts inoperative because of wear occasioned by use. It does not cover the labor cost of replacing parts, neither is it effective if the engine has been the subject of misuse, negligence, or accident, nor if it has been repaired or altered, outside of our Milwaukee Factory or at any factoryapproved Service Station, in any way which, in our judgment, affects its condition or operation.

WARRANTY INSTRUCTIONS

When sending an engine, or engine parts, to a Briggs & Stratton Service Organization for service, at the same time always send by mail the following information: Model Letter (or Number), Type Number,

and Serial Number of the engine. (Take from metal plate on engine.)

Date purchased.

Kind of equipment engine is used on.

Name or trademark of manufacturer.

Name and address of dealer from whom purchased.

Approximate number of hours engine has run since equipment was bought.

Also, give complete report of trouble experienced and special servicing instructions.

The above information is necessary to insure prompt and proper service.

AUTHORIZED SERVICE ORGANIZATION

There is a member of the Briggs & Stratton Service Organization in your neighborhood who is fully qualified to take care of your service needs. Space does not permit listing here, but if you will write to the nearest Central Service Distributor listed below, they will be glad to supply you with name and address.
