

1.5kWh* Swappable Battery

The Vanguard® Lithium-Ion [1.5kWh* Swappable Battery Pack](#) is the latest innovation in Lithium-Ion battery technology from Briggs & Stratton. This swappable battery is built to bring efficiency, versatility and reliability to users in multiple industries that require battery power. The battery's exchangeable nature allows it to be easily swapped out between applications on the jobsite to help reduce downtime. The swappable battery also features expandable power, meaning more than one Vanguard pack can be used together to meet greater power needs.

The swappable battery comes with a standard interface that can work across multiple product platforms, adding versatility and reducing unnecessary costs. The battery is set up for optimized network communication with the product and the internet via an IoT device. This connectivity capability means that users can monitor the battery remotely, control battery-powered products remotely and conduct fleet management. Like all Vanguard products, the swappable battery is tested to ensure that it is able to withstand tough environments and is durable in the face of abuse, debris and dirt.

Accompanying the current lineup of batteries, the swappable battery pack features many of the benefits found in the [3.5kWh*](#), [3.8kWh*](#), [5kWh*](#), [7kWh*](#) and [10kWh*](#) batteries, while also adding some new highlights. Vanguard batteries also come with service and support through a [three-year commercial limited warranty**](#) and are backed by the vast Briggs & Stratton dealer network. The 1.5kWh* will be available May 2023.
